

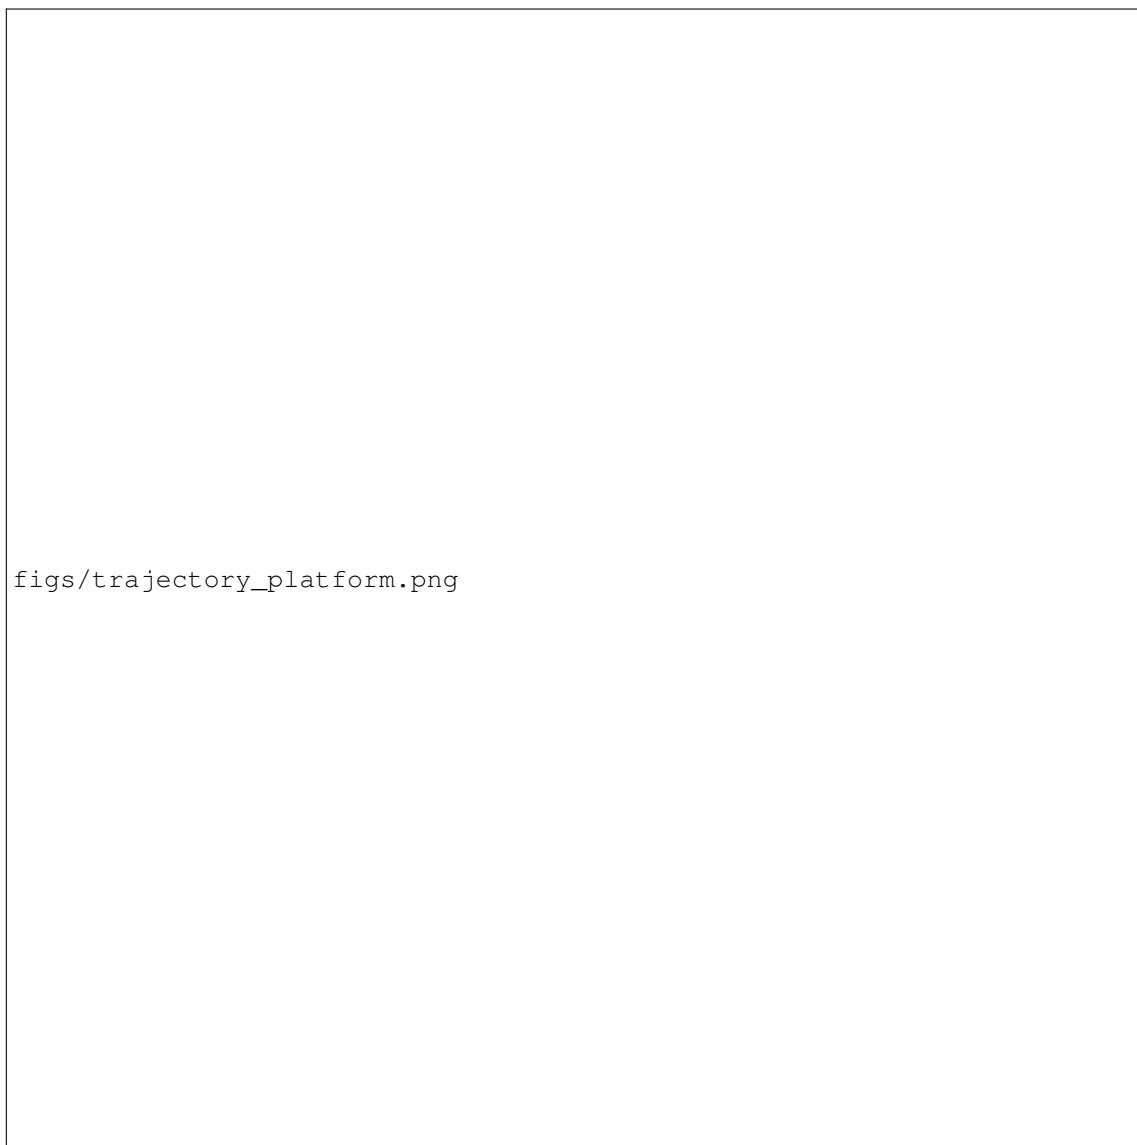

Figure 6: Median trajectories of information retention scores for burst sequences starting in a given platform, using the TextRank-based score. The error bars show the 95% confidence interval around each median value for that point in the sequence.

Figure 7: Median scores of bursts that are co-occurring (true) and bursts that are not co-occurring (false), across platforms.

Figure 8: Median scores for sequence lengths 2-7, stratified by how many platforms are in the sequence. Co-occurring bursts may result in more platforms than bursts in sequences.
